Application Choices

Select from a wide range of industry specific retail enterprise management system modules.

Databases

Hosted environments use ORACLE (OLTP & OLAP).
Mini-Portal environments running in un-hosted modes use either MySql or ORACLE (licence fees apply).

Updating

POS information is fed online real time from iZenPOS directly or from non AMCCIT POS products through a standard XML interface. Sources of real time update include portable data terminals (PDT) or PDA device.

Third Party Systems e.g. Oracle Financials, SAP, Xero and others can be fed by and some can update Zen Global applications directly real time or through the XML specification, CSV or ascii interfaces.

Cost Effective

Pay for what your business uses.

Site(s) & Head Office

Data is held by site in a RDBMS (Oracle & MySql implementations are native residing on the same computer as the Master Site (usually Head Office)). Access to one site or a group of sites or Enterprise wide (Head Office) is controlled by the individual's login privileges.

All transaction detail is held and comprehensive use of drill-down technology is used to deliver to the user relevant information at the desired detail level.

Automatic consolidation for Head Office into regions with enterprise wide reporting of financial & stock management reports including loyalty.

Zen Global Suite PORTAL ASP Software

Features
