

Order@Table

Pay@Table

Let your customers and staff enjoy the ability to place orders directly to the bar or kitchen in your venue using the innovative simple *Order@Table* application with or without payment option.

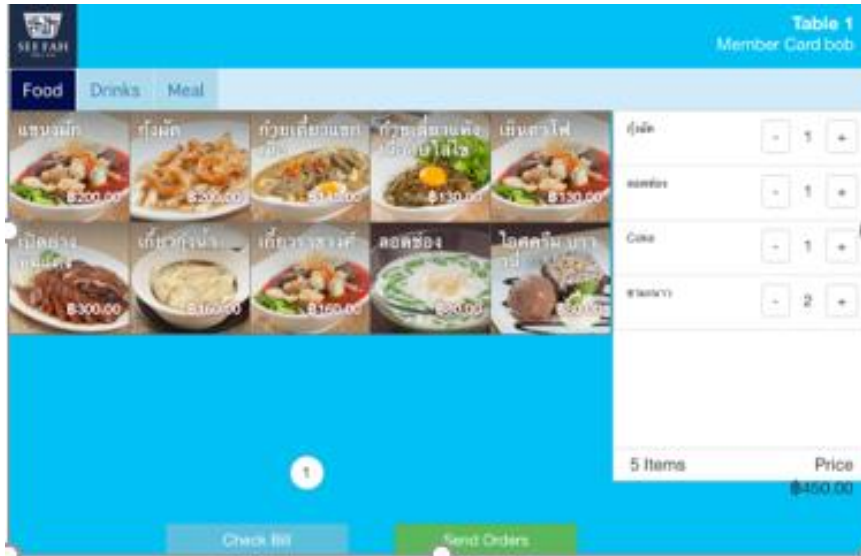

This internet-based application can be downloaded by your customers or staff onto a smart device whether tablet or phone and directly used to place orders for food and drinks in your venue printing directly to a kitchen printer(s) or updating a *bump* screen in the kitchen.

It operates in a variety of modes – waiter, kiosk, table or patron. Items ordered go against a table and at the end of the meal or visit a bill can be displayed or printed. The system allows customers to split bills selecting the items they are each paying for. Each patron can update their loyalty membership with the items purchased even when splitting a bill.

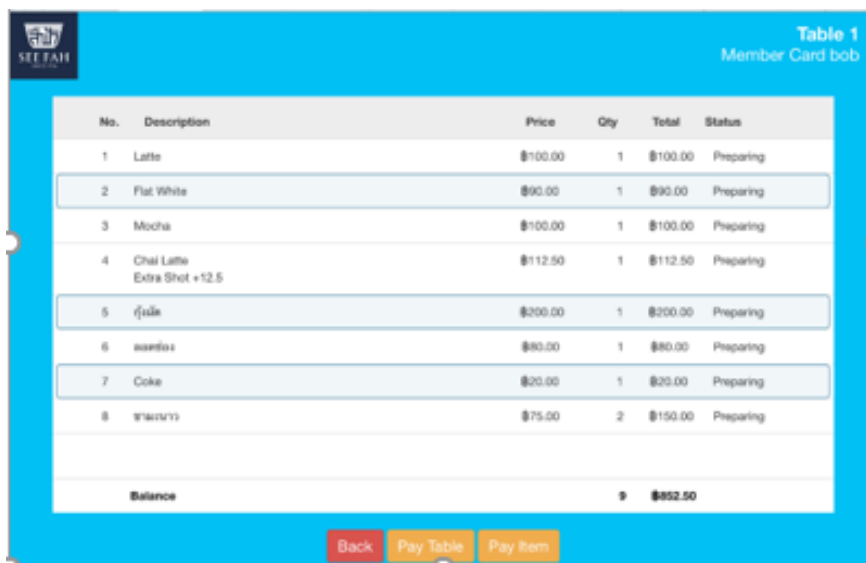

Set your menu up by course e.g. Entrees, Appetizers, Mains, Desserts and Drinks, etc. Use pictures and text on the buttons to describe each item along with the price of the item.

Monitor the number of covers on the table.

In a standalone option the client's bill can be paid to a waiter or paid through the use of a registered credit or debit card directly through the payment option in Order@Table. Cash payments require the involvement of a waiter and are paid using the Pay@Table application. The Order@Table application is fully integrated with the iZenPos application and bills created on the Order@Table application can be printed and paid on an iZenPos point of sale application in the venue. The use of iZenPos enables the splitting and merging of tables. Order@Table and Pay@Table allows splitting of Bills.

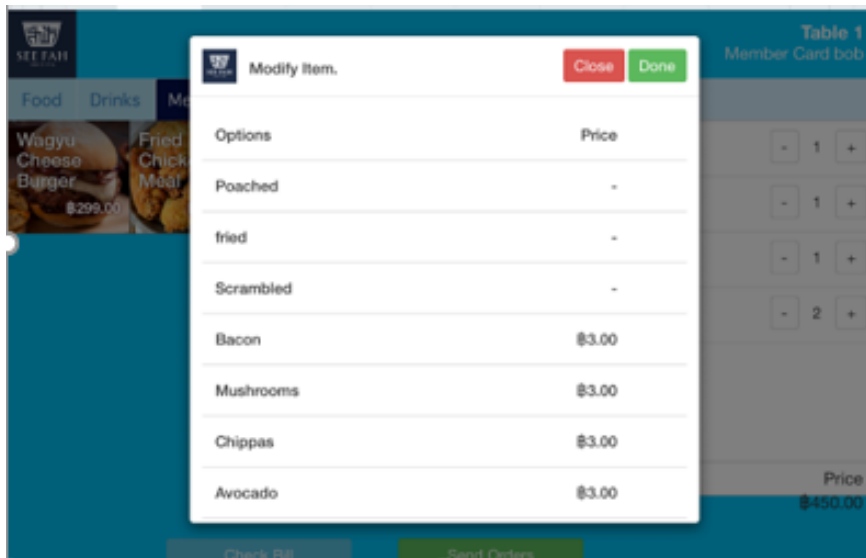

Payment

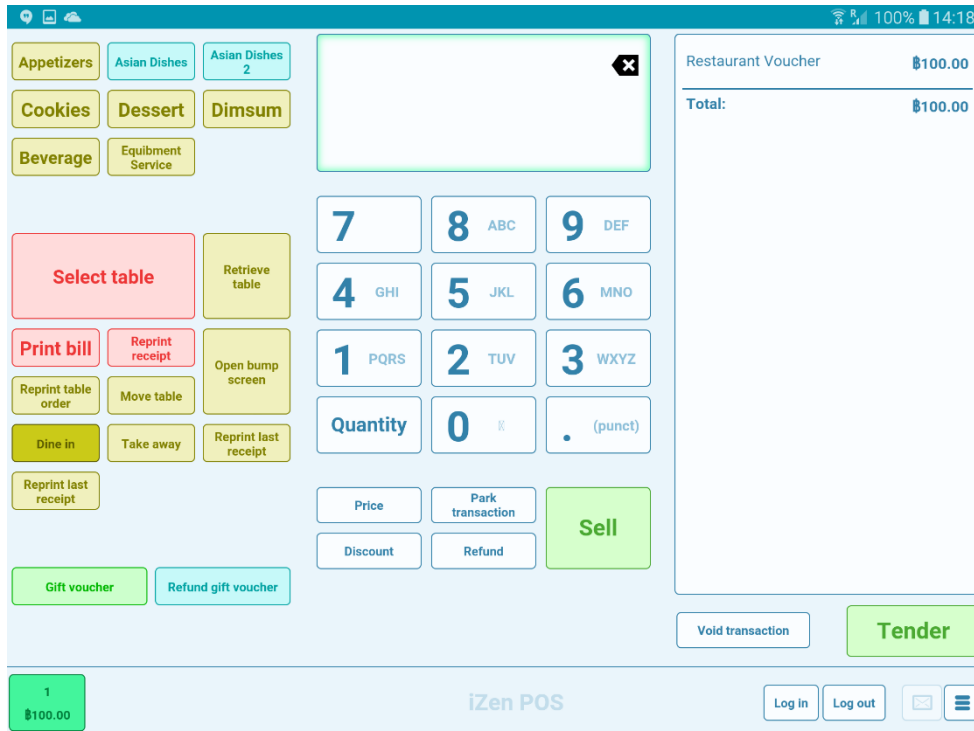

Modifiers

Set up modifiers, either at no charge or a price increase or decrease.

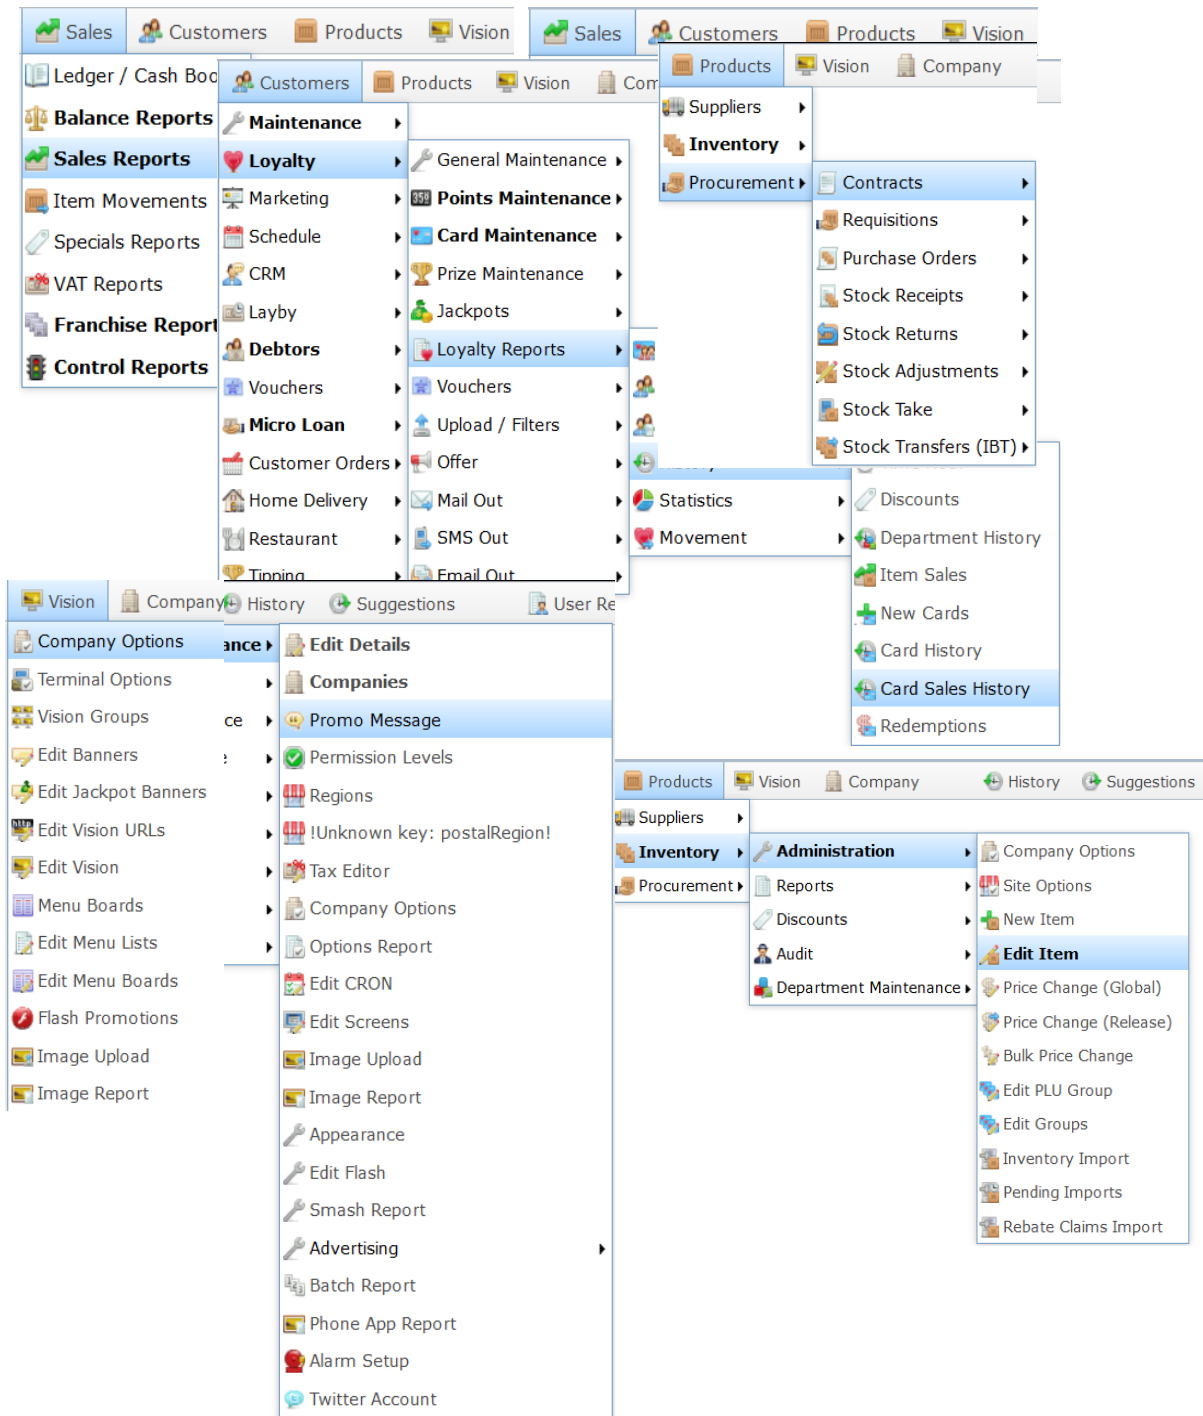

iZenPos

The Order@Table fully integrates with the powerful iZenPos point of sale application. Providing additional payment and reward options for your clients along with tax invoice handling.

Back-Office
