

The browser based POS for Food, FMCG, Butchers, Supermarkets or Retailers selling by weight on the IPAD, Tablets & POS terminals

iZenPOS is the powerful, user friendly Cloud point of sale program operating on Apple's "iPad", on "Windows based" or Linux devices or your Android tablets using a browser. iZenPOS is integrated with the proven AMC Convergent IT (AMCCIT) Cloud Retail Management Portal back office system. iZenPOS has all the functionality, including *offline* capability of the proven Posportal point of sale system.

iZenPOS supports barcode scanning using the iPad/tablet camera and the connection of printers, external barcode scanners and other peripherals using Bluetooth, network or wireless communications and many other peripherals, including magnetic strip readers and EFT.

iZenPOS is the future in POS Management for Your Butcher, Delicatessen or Grocery Business.

Easy to set-up & customise for even the most challenging of business requirements and it contains many features & tools to maximise your business sales & POS investment. Download configurations from the AMCCIT Portal using the iPad's or tablet's identity.

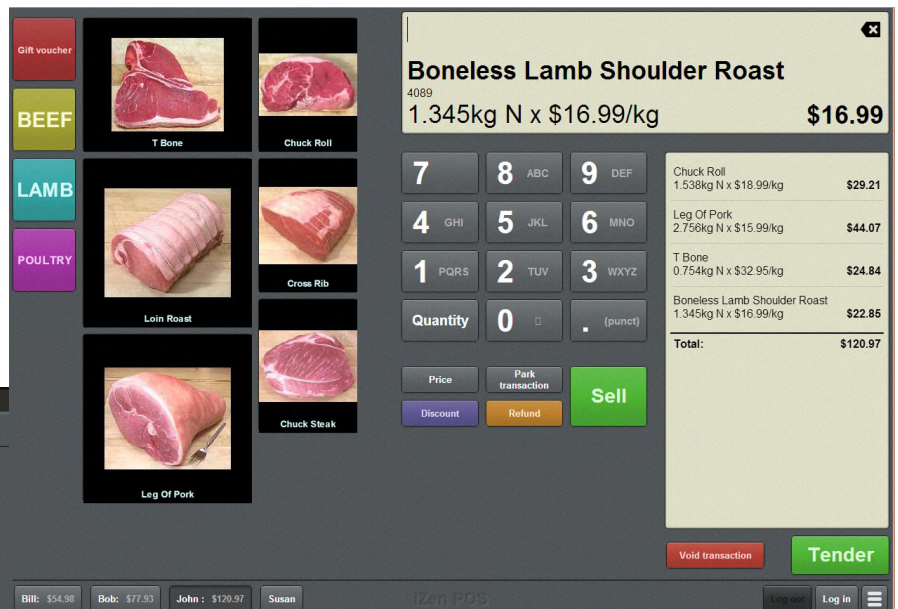

Works as a standalone device connecting to the AMCCIT Portal real time (using 4G or WiFi), or as part of a network of iPad/tablet devices within the same site connecting to a local network computer or other AMCCIT POSPORTAL terminals via WiFi, then to the AMCCIT Portal real time automatically by the Cloud accessing and updating the Portal database.

Operates in **Cashier** (Supermarket – Checkout) or **Sales Assistant modes**. In Sales Assistant mode multiple operators can be using the same iPad/tablet device to make active sales. In Cashier mode a single operator acts as cashier for the terminal & any associated cash drawer.

Suitable for many businesses with and without bricks & mortar. iZenPOS can connect to its Infrastructure as a Service (IaaS) and software as a service (SaaS) back office environments anywhere using any form of Internet connection (LAN or 3G or dongle based) providing the maximum flexibility and mobility for a retailing system.

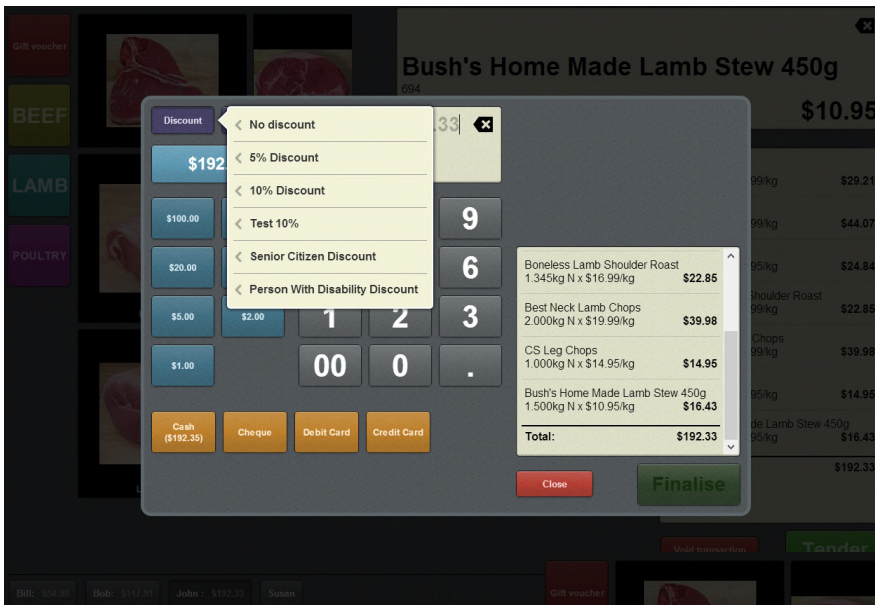

It is suitable for uses in:

- Butcher shops
- Delicatessens
- Fruit and Greengrocers
- Grocery
- Supermarkets
- Yoghurt stores
- Wholesale stores
- **Any retailer where product is sold by weight.**
- Fast Food & Convenience stores
- Food Courts
- Franchise stores
- Store within Store

Simple to use buttons with positive touch.

iZenPOS devices can be *grouped* in a site or company automatically instantly receiving online button, product, operator & other updates.

Intuitive to use.

All the features expected of a large desktop point of sale are available on the iPad/tablet.

Single or multiple operators can use the same iPad/tablet.

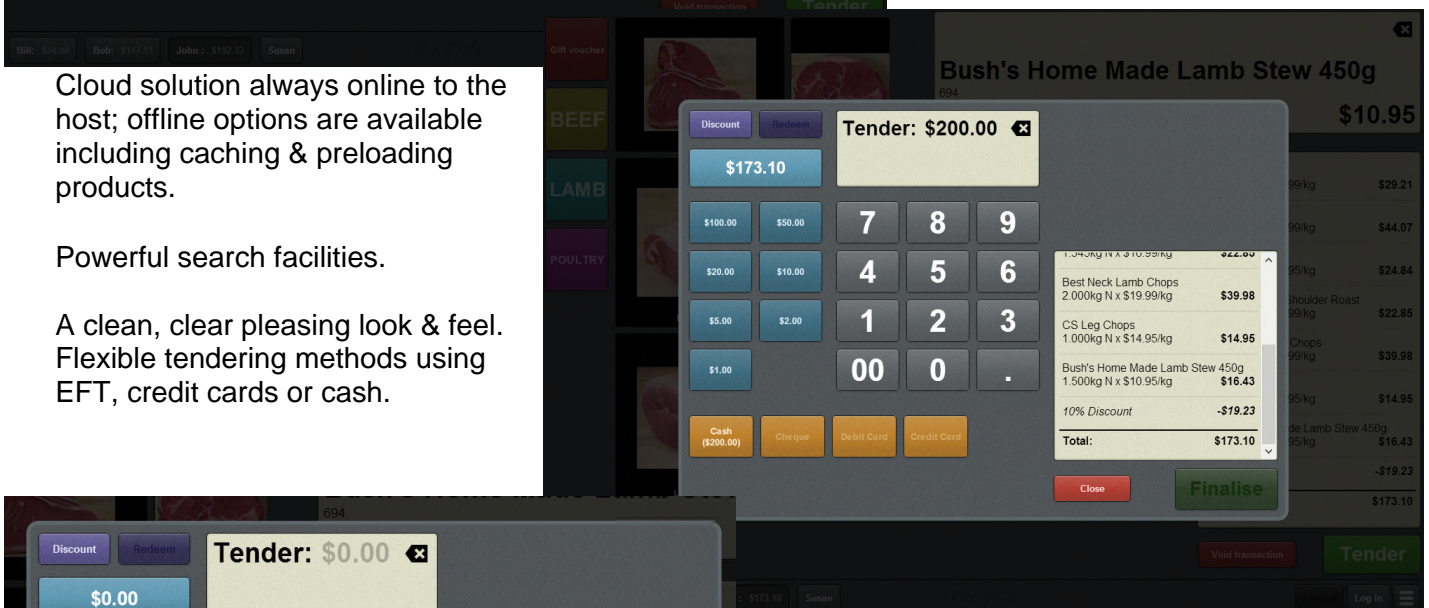

Connect to wireless & dedicated or shared network receipt printers & cash drawers. Print or email or SMS receipts to customers.

Discount controls at item & subtotal

Cloud solution always online to the host; offline options are available including caching & preloading products.

Powerful search facilities.

A clean, clear pleasing look & feel. Flexible tendering methods using EFT, credit cards or cash.

Directly collect money through wireless connected printers & cash drawers or at a PC in store.

Use the in-built scanner technology of the iPad/tablet – either the front or back camera (*if supported*) or a Bluetooth or USB scanner to read 1D & 2D barcodes quickly & reliably.

Login & all securities within iZenPOS & the

PORTAL use comprehensive encryption techniques.

National Measurement Institute (NMI) accredited approval S656.

Country of Origin Labeling (CoOL) compliant.

See the attached features list to see how iZenPOS can assist you to serve your customers better.

SETTING UP AN iZenPOS NETWORK

Use iZenPOS in networks with or without POSPORTAL or conventional POS touch terminals.

Installations with more than a single tablet an *optional controller* provides the ability to share a transaction across any tablet or terminal and supports Vision. iZenPOS on any hardware provides offline capability. (If Posportal is present no controller is required.)

Any other network peripheral can be used. Encasements are available to expand the number of USB & serial ports and card readers.

Installing a new POS to run iZenPOS is very simple. Point to the secure URL, configure the *Group* the device is to belong to and the button layout and other parameters automatically are configured including product master, users and other specifics.
